

Lower Your Total Cleaning Costs

Costs Down, Performance Up

AchievePro™ reflects our commitment to a single goal: providing you with the best cleaning results at the lowest total cost. That commitment includes complete end-to-end support: Space inventory development, system implementation, ongoing technical help, complete user training...plus a full range of cleaning chemicals, supplies and equipment – everything you need to put the power of AchievePro to work in your cleaning program.

AchievePro Cleaning Management Software is compliant with ISSA's CIMS/CIMS-GB standard.

AchievePro™ Cleaning Management Software

Fast / Simple / Complete

A Smarter Way to Optimize Your Cleaning Program

Better results at lower cost. That's the power of AchievePro™ – advanced decision-making software that lets you optimize every aspect of your cleaning program — budgeting, task analysis, workforce management, quality control and more...

Base-Lining Performance

Based on your maintainable area, AchievePro analyzes square footage, use, and flooring variables to accurately assess cleaning program requirements:

- Automatically builds a facility model using embedded tasks and related time/frequency requirements for each facility space.
- Utilizes cleaning time standards developed by ISSA®, APPA and leading independent consultants for results you can trust.
- Time requirements can be calculated per square foot, for area-based tasks such as floor care; or per item, for tasks such as cleaning a toilet, desks, fixtures, etc.

Profile facility spaces and cleaning costs.

Allocating Resources

With AchievePro, you can deploy the ideal combination of personnel, supplies and equipment for every space and cleaning task—in a fraction of the time:

- AchievePro lets you produce labor cost estimates for every task and space in your facility.
- AchievePro speeds and simplifies creation and printing of work assignments by area, task or staff member.
- Customizable cleaning chemical library and embedded coverage factors enable calculation of chemical usage by cleaning task and space.
- Built-in cleaning equipment library allows ROI calculation and projection of potential time savings (labor optimization) using various equipment options.

Taking Control

From monitoring performance to on-the-go-problem solving, AchievePro gives you total control of every task, every space, every work assignment:

- Easy-to-use on-screen calculators allow you to instantly see the effect of changes in cleaning procedures, task frequency and other variables.
- "What-if" options allow you to project time and costs to achieve any of five cleanliness levels for a task, work assignment or an entire cleaning program.
- A complete set of tools allow you to store, access and apply personnel data, training records and other management information.

Tracking Results

AchievePro enables highly effective workforce rationalization, process documentation and quality assurance—the keys to better, more cost-effective cleaning programs:

- Real time reporting: Inspection detail can be instantly incorporated into AchievePro software via remote PDA or laptop.
- Software stores and organizes inspection data by date, time, work assignment and team member(s) for faster, more targeted analysis.
- Comprehensive report options reinforce accountability, validate base-line assumptions and promote continuous improvement.

Run multiple reports or build your own.

You Have Questions, AchievePro Has Answers

- Can we lower costs, and still improve cleaning performance?
- Does our team include the right people with the right skills?
- Are we operating at peak productivity?
- How can we effectively measure results?
- How can we justify our cleaning budget?
- How do we improve team morale?
- How can we cost-optimize our equipment, chemicals and supplies?

The most powerful decision-making tool
for facility managers
